The U.S. forklift division based in Cleveland has a professional team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original home-based lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled lift trucks as part of a nationwide equipment expansion venture. Early product sales of this industrialized equipment focused on large business communities, the armed forces and on state-run corporations. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for improving quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of substantial growth of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a joint venture project to help them in the very competitive North American materials handling market. This project proved highly lucrative for Daewoo and their lift truck sales expanded greatly. In 1984, the company finished development of a new facility to help in producing high end value-added products for export. In 1993, the company had a international sales network and started exporting models they had developed through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international marketplaces.
