

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials meant to endure the most demanding procedures and work environments. This particular piece of equipment can enable the individual driving to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the arms or the entire load so as to facilitate much more accurate lifting and position in a quicker and much more effective manner.

The fork pocket is rather unique and enables the person operating it to be able to securely swing the forks into position without any worry of destroying the positioning cylinders. This can allow the operator the alternative to execute simultaneous or independent fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into blade positioners on existing units.
