

Used Parts for Forklift

Used Forklift Parts - Sooner or later, lift truck components will wear and should be replaced. Purchasing new components can become a pricey endeavor so one more idea is to acquire used forklift parts. This can save much money eventually. It is a good idea to purchase used lift truck components that have been remanufactured. These components would ensure that you are getting parts which will work for a long time and be productive.

Remanufacturing broken and worn out components is a less expensive method in general compared to rebuilding. With rebuilding parts, only the parts which are broken or worn out get changed, which means that other wearable parts may break down soon after acquisition.

Remanufacturing however provides the best assurance for second-hand components. Remanufactured parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable components are replaced regardless of age or wear which is another reason why reproduced components overall operate so much better. Any component within the part is new and this provides much longer life to the second-hand part. Depending on the forklift parts that are being redone, the cleaning process and the whole remanufacturing process would differ.

The engines are cleaned after a complete disassembly. Several engine components like for instance rings, pistons, spark plugs, valve springs, filters, and valves can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no oil pressure problems, no leaks, noises or any vacuum.

Transmissions are one more item that is oven cleaned after being disassembled. The transmission is then pressure washed. A complete examination is performed in order to check for any cracks. Bushings, seals and bearings are all replaced. Usually, the replacement components used on transmission parts meet OEM specifications.

Some lift truck parts like for instance torque converters, the alternator, the water pump, steer axles and the starter could be quite serviceable after worn components are replaced. The electronic control in the electric forklift is maintained by the control card. This card could even be reproduced with replacing all aged and worn out components. Not like different forklift parts the control card could only have the worn and aged parts replaced.

Remanufactured parts are meticulously inspected upon reassembly to guarantee they are in top condition before being sold. It is important when obtaining remanufactured parts to make sure they have undergone the proper testing and inspection procedures. On certain larger components like for example steer axles, engines and transmissions, OEM specification replacement parts should be used.

The forklift dealer can guarantee that the components they have reproduced meet the OEM specifications. This will likewise guarantee the components meet industry standards. Lots of details go into remanufacturing used parts. This attention to detail provides more serviceability out of remanufactured components compared to the components that were simply rebuilt.
